Introduction

1.1 Overview

As a part of Godadays's Web A Thon I uilt this applicatiom for the purpose of managing the Inventory at various businees is difficult ans some times we may lose few products as well. my projectwas to prevnt the lose and as well find the product last lace and usedby by tracking the product with my application.

1.2 Purpose

This project for Inventory Management in various business for example production houses, film Industry, Inventory rental services, manufacturing etc.
at this businss areas the Inventory tracking and keping safe is tough call. my project makes this easy by making the register of Inventory taken y the employee/prson on date, time and to place.
This maks the business easy and helps in loss of Invntory as well tracks fast by search product name, employee name etc.

Literature Survey

2.1 Existing Problem

At Businesses like production houses, Film Industry, Manufacturing Factories etc tracking Inventory is hard, old method was registering in the paper or excel sheets ut anyone with the password to system can change them. and may endup with th loss of Inventory or couldn't find last where abouts of Inventory in time when neede in emergency.

2.2 Proposed Solution

A 2 factor vrify application only the head/ Owner or the person incharge can edit the products or delete. other employees can update the details of Inventory which they are in posses in and the place. so that anyone can find the particularproduct whereaouts in time and alo we can rvent loss of the Inventory.
